Variant Images

The images stored for a Variation Group can be associated with a specific variation value. For example, you may have an image for each color. Note that this is different than storing variation specific images on the variation items directly.

To enable this feature, you must select the specific Attribute used to identify the images and then associate any images with the specific Value.

This is an example of an item that has images that vary by color

Use the Filter setting to control which images are displayed on the editing screen. This setting has no impact on the actual image data stored.

You can disable variation specific images by setting the Attribute to "(none)"
