

Basic Item Details

EVP will store information about a product (aka SKU). The type of information impacts where it is stored. Product information will be divided into two primary categories. These categories are MasterSKU level details and ChannelSKU level details. MasterSKU Level details are channel agnostic, meaning the information is the same regardless of Channel. ChannelSKU level details are specific to a channel; ChannelSKU level details will differ depending on whether the Channel record exists on a supplier or sales channel. As an EVP power user, you should understand what import processes are in place and where the data is being imported.

It is common in an EVP environment to have data from multiple sources. EVP has various tools to manage and prioritize this data.

MasterSKU level details consist of the following data points:

- MasterSKU Value
- Item Type
- Harmonized Tariff
- Origin
- Dangerous Code
- Manufacturer
- Part Number
- Condition
- Title
- UOM Configuration
 - UOM Variations
 - Weight
 - Width
 - Length
 - Height
- Physical Location
- Packaging

ChannelSKU level details consist of the following data points:

- Sales Channel Record
 - Channel SKU
 - UOM
 - Publication Mode
 - Review State
 - Status
 - Availability Mode
 - Min Qty Threshold
 - Max Publish QTY
 - Fulfillment Method
 - Prep Time
 - Category
 - Product Type
 - Publication Template
 - Attributes
 - Price
 - MSRP
 - MAP
 - UPP
 - Shipping Template
- Supplier Channel Record
 - Channel SKU
 - UOM
 - Fulfillment Method
 - Fulfillment Mode
 - Min Order
 - Max Order
 - Latency (SKU Level)
 - Inventory/QTY
 - Category
 - Product Type
 - Attributes

- Cost
 - MSRP
 - MAP
 - UPP
