- CATM-SELC: Selection Criteria
- CATM-ISET: Item Sets
- CATM-DYRT: Dynamic Restrictions
- CATM-CATS: Catalog Source Utility
- CATM-ICRE: Item Creator
- CATM: General Catalog Screens & Functions
 - CATM: Master Items
 - CATM: Channel Listings Screens

Several screens, including Master Items, Sales Channel Listings, Supplier Channel Listings, and the item details screen, allow users to view the catalog structure within EVP.

CATM-CTAX: Taxonomies

CATM-CTAX: Taxonomy Screens and Functions

The EVP Data Dictionary is based on a taxonomy-driven model within our channel and category structure. There is no specific limitation on what attributes can be associated with a channel listing. This XML definition of a channel structure allows the attributes to be defined, including attribute types and validation criteria. Here is the default EVP Etail channel taxonomy as an example.

```

<?XML version="1.0" encoding="utf-8"?>
<Taxonomy Name="Etail">

```

Once an attribute is defined within a channel, it can be mapped for use in any other channel plus automatically becomes exposed to the integration layer for use in messages. At the database layer there is no fixed database record for a channel, based on taxonomy definition or initial data processed the value will be stored in a short (up to 250 characters or long field

(unlimited), this includes product images, HTML records, etc. Using this approach the catalog and item master business object can be viewed as unlimited.

The System Module menu tree allows an Admin user to view the taxonomies within the system, select one to view the details, and perform functions such as creating/initializing a taxonomy, exporting to allow editing, importing, etc.

CATM-CPTY: Category / Product Type

CATM-CPTY: Catalog and Product Type Screens and Functions

Every taxonomy can have a category and an associated product type tree; these data structures are most common within a sales channel. An item is associated with a single category that controls where it will be sold within the sales channel and which attributes can be set for it. The Product Type has more limited use and typically controls the commission percentage associated with selling the product on a marketplace.

CATM-CMAP: Category Mapping

CATM-CMAP: Catalog Mapping Screens and Functions

The best practice is to choose a master channel, typically Amazon, and then map it to the Etail channel

Channel: Amazon							
Target Channel		Etail	Export Import Apply Auto Create				
Name	Code	Items	To Code	Allow Items	To Name	To Product Type	
Amazon General	Amazon	134,451	Etail	<input checked="" type="checkbox"/>	Etail General		
	2226022011	0		<input type="checkbox"/>			
Alexa Skills	13727922011	0		<input type="checkbox"/>			
Amazon Instant Video	16261641	0		<input type="checkbox"/>			
Appliances	2619526011	7		<input type="checkbox"/>			
Air Conditioners	2619526011\3737671	0	120219	<input checked="" type="checkbox"/>	Air Conditioners		
Air Purifiers	2619526011\267554011	0	120220	<input checked="" type="checkbox"/>	Air Purifiers		
Beer Keg Refrigerators	2619526011\2686378011	0	120592	<input checked="" type="checkbox"/>	Refrigerators		
Beverage Refrigerators	2619526011\2686328011	0	120592	<input checked="" type="checkbox"/>	Refrigerators		
Ceiling Fans & Accessories	2619526011\495362	0	120224	<input checked="" type="checkbox"/>	Ceiling Fans		
Compact Refrigerators	2619526011\678542011	0	120592	<input checked="" type="checkbox"/>	Refrigerators		
Cooktops	2619526011\3741261	0	120533	<input checked="" type="checkbox"/>	Cooktops		
Dehumidifiers	2619526011\267557011	0	120221	<input checked="" type="checkbox"/>	Dehumidifiers		
Dishwashers	2619526011\3741271	0	120537	<input checked="" type="checkbox"/>	Dishwashers		
Fans	2619526011\3737601	0	120223	<input checked="" type="checkbox"/>	Fans		
Freezers	2619526011\3741331	0		<input type="checkbox"/>			
Garbage Disposals	2619526011\680343011	0		<input type="checkbox"/>			
Garbage Disposals & Compactors	2619526011\18116205011	0		<input type="checkbox"/>			
Heating, Cooling & Air Quality	2619526011\18116199011	0		<input type="checkbox"/>			
Humidifiers	2619526011\267555011	0		<input type="checkbox"/>			
Ice Makers	2619526011\2399939011	0		<input type="checkbox"/>			
Irons, Steamers & Accessories	2619526011\510240	0		<input type="checkbox"/>			
Laundry Appliances	2619526011\18116194011	1		<input type="checkbox"/>			
Microwave Ovens	2619526011\289935	0		<input type="checkbox"/>			
Parts & Accessories	2619526011\3741181	201	120174	<input checked="" type="checkbox"/>	Air Conditioner Accessories		
Range Hoods	2619526011\3741441	11	120590	<input checked="" type="checkbox"/>	Range Hoods		
Ranges	2619526011\3741411	0		<input type="checkbox"/>

CATM-AMAP: Attribute Mapping

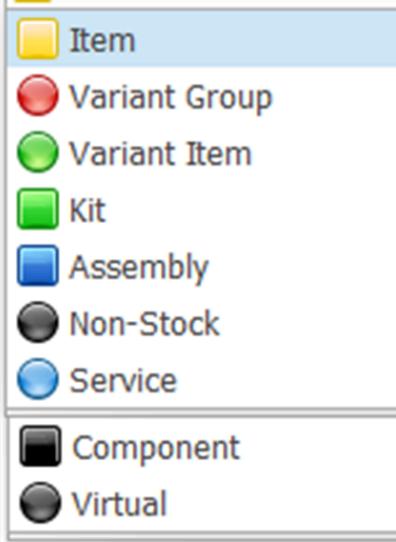

CATM-AMAP: Attribute Mapping Screens and Functions

The best practice is to map from the Supplier/Sales channel to the Etail channel and then to the next channel. As lots of channels can have the same attribute, it lets you control which channels will be considered and in what sequence. So if the eBay listing needs a BulletPoint to associate with the listing, but no attribute of this name is defined, EVP will look at the website sales channel, Walmart, and Amazon. The first channel to have an attribute of this name will be used.

Target Code	Source Channel	Source Code	Priority	Map Type	Unit Specific	...

CATM-IT: Item Types

Selling a master item at each level on every sales channel is often a brand-centric approach. Still, resellers and even brands want to support creative ways of selling these products or handle challenges in item versioning. To support these value-added scenarios, the EVP solution offers several capabilities that enable the combination of base items into different sales-level combinations with minimal impact on the fulfillment process.

Item (CATM-IT-ITEM)

This Item Type represents items that will be purchased or stocked and can serve as a building block for 'Pack of n' or a combination of items defined in a different item master sales configuration, such as a kit.

Suppose the master item is stocked at each level but is sold on multiple sales listings as "Each", "Pack_2", and "Pack_4". Available inventory will be published in multiples of the Pack Qty. For example, if a base item has 3 in stock, it will be published as 3 in the Each listing, 1 in the Pack_2 listing, and 0 in the Pack_4 listing. When an order is received for a Pack_2, the sales quantity will be one, but it will be handled as 2 x Each for order fulfillment.

Pack_2

Pack_4

Service (CATM-IT-SERV)

This Item Type represents an item that defines a service to be performed on the order, i.e., by a kit of wheels and tires, plus the service item to mount the tires onto the wheels. This item type has no associated inventory; however, a user must confirm that the service was performed before the order is marked as fulfilled.

NON-STOCK (CATM-IT-NONS)

This Item Type represents a digital item that is not stocked and requires no additional services to be performed on an order. It is typically used to process orders that include digital gift cards, round-up donations, or state-level tire fees that must be paid when purchasing new tires. When this type of item is present on an order it will be immediately marked fulfilled, if it is the only item on the sale order, the sales order will be marked fulfilled.

Kit (CATM-IT-KIT)

A kit is a virtual combination of items for which EVP will publish an inventory quantity based on the availability of the master items that comprise the kit; i.e., a partial kit cannot be sold. The kit will have a sales listing on the relevant sales channel, and the price will be based on the combination of master items in its Bill of Materials (BOM). When an order is received for one kit, the sales qty will be one. Still, the EVP order line details will be broken down into the master items that make up the kit. For example, if the kit comprises Item IAI x 3 and IBI x 2, there will be two order lines: one for 3 of IAI and one for 2 of IBI. EVP will handle selling the same master item as a kit and on their own sales listings, where it can be sold at the ‘Each’ and ‘Pack of n’ level.

Unit of Measure	Physical Locations	Assembly/Kit Items	Restrictions	Packaging
Kit Availability:	876	Kit Cost:	\$32.32	
Item	UOM	Kit Qty	Total Qty	Allocated
Click here to add a new row				
26Black	EACH	1	1,802	16
ChampionPlaque	EACH	1	4,951	14
SilverFB	EACH	1	2,661	8
				Demand Available On Order Cost Del..

Assembly (CATM-IT-ASSY)

An assembly needs a value-added step to create and convert the master items into an assembly item in stock before it is published as a sellable quantity. Like a kit, an assembly will have a Bill of

Materials that defines what combination of items is consumed from stock when an assembly is created.

The screenshot shows a software interface for managing item details. On the left, there's a form with fields like Master SKU, Item Type (Assembly), Harmonized Tariff, Origin, Manufacturer, Part Number, Status (Active), Condition (New), Buyer, and Title (Monopoly Money Bag Black). On the right, there's a grid of items with columns for Item, UOM, Kit Qty, Ship, Total..., Allocat..., Dema..., Avail..., On..., Cost, and Del... . A message at the top of the grid says "Click here to add a new row". The grid contains four rows of data:

Item	UOM	Kit Qty	Ship	Total...	Allocat...	Dema...	Avail...	On...	Cost	Del...
AcrylicChain-GLD	EACH	1		474	68	72	402	0	\$1.44	
AcrylicSheet-3mm-MirrorGold	EACH	1		890	55	59	831	0	\$0.93	
AcrylicSheet-6mm-MatteBlack	EACH	1		523	92	96	427	7,700	\$1.37	
MoneyBagBlack	EACH	1		16	0	0	16	0	\$0.01	

Virtual Item (CATM-IT-VIRI)

A Virtual item allows you to indicate that a single sales item could be fulfilled from one or more master items; can be assigned a relative priority to control the order in which inventory is checked for fulfillment, plus a qty at the item version level to allow you to adjust the qty of what is shipped, i.e. the sales listing is for one pack of 2 item that is stocked as a pre-assembled pack of 2. Still, if the assembly is out of stock, the system selects each item and ships x 2.

The screenshot shows a software interface for managing item relationships. At the top, there's a table with columns for Sku, Properties (including Created By, Status, Process Code, Title, Manufacturer, Part #, UPC, Item Type, Variation, Parent SKU, Created Date, and In Stock), and Stock. Below it is a list of items with their properties. At the bottom, there's a table titled "Edit Relationships" with columns for Sku, Title, Item Type, Priority, Quantity, and Value. The table contains three rows:

Sku	Title	Item Type	Priority	Quantity	Value
Version	MoneyBagBlack	Item	1	1.000	
Version	AcrylicChain-Mono-MBB-Assembly	Assembly	2	1.000	
Version	AcrylicChain-Mono-MoneyBagBlack	Kit	3	1.000	

CATM-IWDPC: Item Weight and Dimension Priority Control

CATM-IWDPC: Item Weight and Dimension Priority

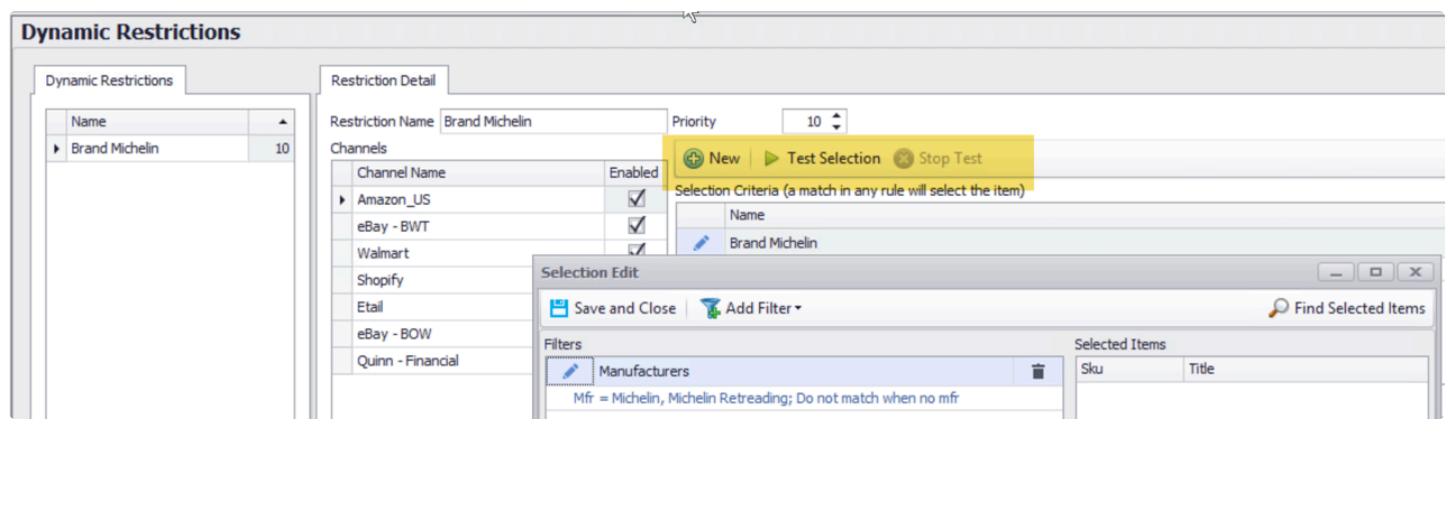

An Admin user can access the system module and then select the 'Item Weight Priority' tab to see how the system is set up to handle weight; if the 'Enable..' checkbox is not selected the default channel lookup logic will be used; to have more control on what values are used can sort the channels as needed, indicate which ones should be considered in the shipping cost calculation. The items will be updated once the daily job runs, i.e., overnight.

CATM-SELC: Selection Criteria

CATM-SELC: Selection Criteria

The selection criteria option is one of EVP's most potent configuration tools. It is exposed in many different features to allow an almost unlimited set of permutations to be configured. It is possible to define multiple selection criteria within a single rule that will be combined as 'Selection 1' AND 'Selection 2' is True; the item will be selected. If multiple filter rules are defined each rule we are evaluated as 'Rule 1' OR 'Rule 2'. If either rule is True, the item is selected.

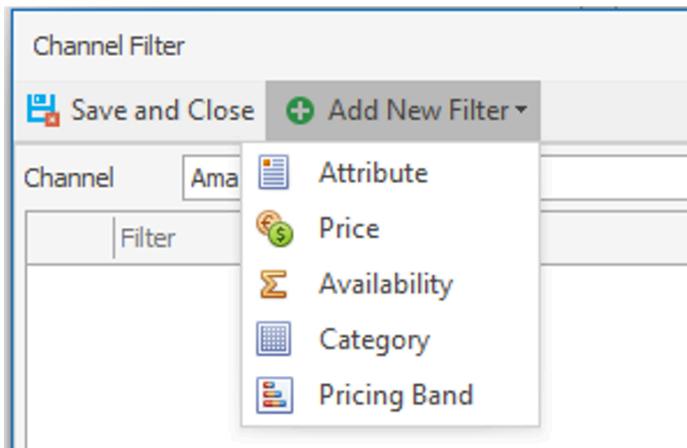

The screenshot shows the 'Dynamic Restrictions' configuration screen. On the left, a table lists existing restrictions. In the center, a detailed view for 'Brand Michelin' is shown. A yellow box highlights the 'Test Selection' button. Below it, a 'Selection Criteria' dialog is open, containing a table with a single row: 'Name' and 'Brand Michelin'. At the bottom of the dialog, there are 'Save and Close' and 'Add Filter' buttons, along with a 'Find Selected Items' link. The overall interface is a standard web-based configuration tool with various buttons and input fields.

The initial part of the selection criteria is defining the overall boolean check you are trying to perform and at what level. These options are most commonly used at the Match criteria level.

- **Exists or NotExist:** Your Item has or does not have a channel record for this channel.
- **Equal or NotEqual:** The data on the channel record for the item must equal or not equal the values or conditions you are setting in the additional Selection Criteria at the Attribute Level.
- **Self:** This is the default option for Any Sales Channel reference, as you typically wish to check for specific conditions on a sales listing, while the other match options are for all channels on an item.

The selection criteria options can be combined into one or more filter criteria are.

Policy Detail		
Name	FBM UK \$9.99 And Less (A.UK - HS)	Type
Settings	Selection	Advanced
New Test Selection Stop Test		
Selection Criteria (a match in any rule will select the item)		
Rule 1 A.UK - HS:A.UK - HS {Self} = (Fba {not in list} Yes) and Etail:Etail = (Cost < 9.99) Rule 4 A.UK_FR:A.UK_FR {Self} = (Fba {not in list} Yes) and Etail:Etail = (Cost < 9.99) Rule 2 A.UK_DE:A.UK_DE {Self} = (Fba {not in list} Yes) and Etail:Etail = (Cost < 9.99) Rule 3 A.UK_ES:A.UK_ES {Self} = (Fba {not in list} Yes) and Etail:Etail = (Cost < 9.99)		

This is a selection criterion that checks multiple values to validate if a sales listing is associated with the Brand Yeti, could be used to remove a sales listing, assign a shipping policy, or select a pricing policy.

CATM-ISET: Item Sets

Item Sets

The item set feature allows you to filter which items are considered by a process. For example, if you just added a new supplier, you may want the Dynamic Auto-Matcher to focus Amazon lookups on this new supplier only.

Item Sets

Create New Item Set

CATM-DYRT: Dynamic Restrictions

Dynamic Restrictions

The dynamic restrictions feature allows you to define selection criteria filters that will stop sales listings from being created either by a user or an automated process. In this example, a merchant does not want to sell items that weigh more than 70 LBS, i.e., cannot go by parcel carrier. This feature also has a daily processor that will check the channel listing that has already been created and trigger its deletion from a sales channel. This feature complements or effectively replaces the manually set Restrictions that can be added at the Master Item level. This approach needs a user to find a listing proactively then add the restriction. In contrast, the Dynamic Restrictions will block their creation and continuously scan the catalog to find a listing that has been recently added with conflict filters.

CATM-CATS: Catalog Source Utility

The Catalog Source framework allows item, price, and inventory level data to be loaded via a flexible screen-based mapping tool. It supports:

- Loading data into temporary transfer tables
- Validate data against format and business rules
- Apply mapping and validations

The source items are then processed to see if they are New, Updated, or Loaded. Once the impact of the data set is understood, it can be loaded into the operational tables. If needed, the pre-processing step in the temporary tables can be purge and reloaded multiple times with various validation and mapping changes. Then, only when ready, is the data uploaded into operational tables.

Once the Catalog Source has been created and validated, it can be scheduled to run when needed. It will use a service to connect to a remote system, obtain the required raw data, and then load it into operational tables once it passes the required validation and mapping rules.

CATM-ICRE: Item Creator

An Item Creator processor step is one of two primary methods to create a Channel's Catalog in EVP (the other being a Catalog Source import). Item Creators are configured to look at a Reference Channel. If the listing exists on the reference channel, it is created on the Channel where the Item Creator runs.

CATM: General Catalog Screens & Functions

CATM: Master Items

Master Item Screens and Functions

You can access the Item screen by selecting any item-level hyperlink on a list or detail screen or the blue pen on the Master Item or Channel listing screen. Then select the 'Detail' option.

The screenshot shows the 'Detail Multi-Channel Item' window with several sections highlighted by red boxes and numbered callouts:

- Callout 1:** Primary attributes associated with the master item (e.g., Master SKU, Item Type, Harmonized Tariff, Origin, Manufacturer, Part Number, Status, Condition, Buyer, Title, Notes).
- Callout 2:** Product Identifiers associated with the master item, i.e., UPC, EAN, ISBN, or GTIN.
- Callout 3:** Inventory Levels, Inventory Events, and Item History.
- Callout 4:** Unit of Measure, Physical Locations, Restrictions, and Packaging.
- Callout 5:** Item Images.
- Callout 6:** Top-level navigation and file operations (Save, Merge, Check Restrictions, Change Item Type, New Channel Record, Upload, Download, FDD).
- Callout 7:** Stock management options (Detail, Sales Listings, Suppliers, Integration, Item Images).

1 Primary attributes associated with the master item

2 The Product Identifiers associated with the master item, i.e., UPC, EAN, ISBN, or GTIN. The Primary identifier, Manufacturer, and MPN or Master SKU are used when loading channel records to associate with the master item, i.e., a single master item may have three suppliers with

different supplier part numbers, but two provide MPN, and one provides UPC, so they all merge under the same master item

Master SKU	WZ55351
Item Type	Item
Harmonized Tariff	(n/a)
Origin	(n/a)
Manufacturer	
Part Number	WZ55351
Status	Active

Identifiers		Replenishment
Type	Value	Primary
UPC	691821507009	UOM
Click to enter a new identifier		
Record 1 of 1		

3 The master item reflects a stockable UOM, so inventory on all channels is tracked at this level and normalized to the base UOM, typically an Each. Inventory will be shown at the location level, so if you have 2 in stock, 3 in FBA Sellable, and 20 at the Supplier location, three records will be displayed in this panel. Inventory events provide details of what activities have occurred on inventory you own in specific locations, i.e., if you adjust the qty in your stock location from 3 to 2, there would be an inventory event record that a -1 adjustment occurred and which user or system made the adjustment.

Inventory Levels	Inventory Events	Item History
Update Allocation	Update Demand	
Location Name	Last Event	

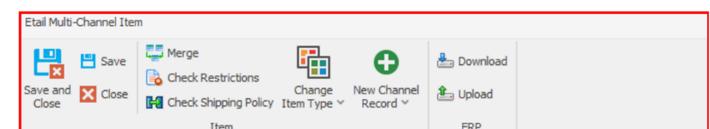

5 This is the primary image associated with the Master Item; the user can select the 'Images' option to view all images and how they are associated with a sales channel, including their display sequence.

7 This Selector allows you to view different views of the master item, i.e., all the sales listings associated with it.

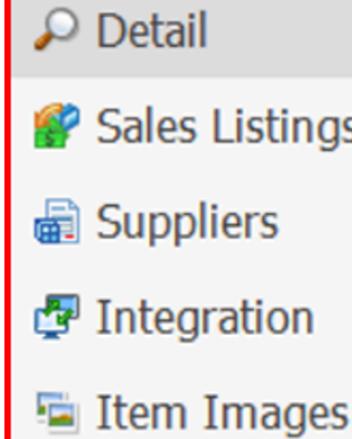

4 This panel displays the weight and dimensions for each UOM associated with the master item. These values are used to calculate shipping costs. The physical location allows you to associate one or more physical locations with a master item. This is a reference-only field, and the inventory qty is not tracked at this level, but it can be included on a Putaway List or Pick List, so the warehouse associate knows where to place the item.

Unit of Measure							
Add New UOM		Update Weights from Channel Data					
Code	Quant...	Base	Weight	Width	Length	Height	Source
EACH	1.00	<input checked="" type="checkbox"/>	7.000	5.000	47.000	26.000	Manual

6 The menu ribbon for the item screen allows you to perform actions on a single master item record

If multiple items need to be updated, there are multiple file importing options to perform this task:

- **Catalog Source** – The newest option that allows you to maintain master item details and the value of a single channel
- **Multi-channel Importer** – A Master Item Level options that allow you to maintain attributes and master item details using a single import
- **Import Updates** – A Master Item level option to perform maintenance on Status, Item Type, Merge, etc.
 - **Import Item Data** – A channel level option that allows you to maintain attributes on a specific channel record

Master Item to Manufacturer Association - As each supplier or data source channel could have a different name for the same manufacturer, EVP supports the ability to assign alias values at the channel level that can cross-reference to the manufacturer name assigned to the master item.

The screenshot shows the 'Channel: Detail' interface with several tabs at the top:

- Channel: Contains Save, Delete, Import Item Data, and Categories buttons.
- Mapping: Contains Attributes and Categories buttons.
- Shipping: Contains Resubmit Tracking, Bands, Settings, Contacts, Locations, and EDI Config buttons.
- Configuration: Contains Shipping Levels, List, New, and Import buttons.
- Manufacturers: Contains Load Shipments from IBS Logfile, Utility, and Inventory buttons.
- Utility: Contains Import Inventory, Export Inventory Value, Reset Inventory, Edit Reason Codes, Update Demand, and Recalculate Value buttons.
- Inventory: Contains Load Shipments from IBS Logfile, Utility, and Inventory buttons.

The main area displays a table of Manufacturers:

Name	Abbr	Brand	Parent Name	Channel Code	Item Count	
10C TECHNOLOGIES	DQWB				4	Delete
20/10 PRODUCTS	BLGW				7	Delete
2X4 BASICS	FJVK				7	Delete
3 IN 1	DMPK				10	Delete
303 PRODUCTS	BGNX				84	Delete
3M	BBBB				10,440	Delete
ABSOLUTE COATINGS	FVST		Absco		294	Delete

Below the table are two tabs: 'Name Variations' and 'Sample Items'. The 'Name Variations' tab lists variations like '3m company', '3mbondo', '3m automotive', '3m chmd', '3m co', and '3m marine', each associated with an 'Amazon' channel name.

The right side of the screen shows an 'Errors' section with a table of conflicts and unknown errors, each with a 'Clear Errors' button:

Name	Count	Action
WALKER EXHAUST 35015 INSULATOR	1	Delete
WALKER EXHAUST 35192 BUSHING	1	Delete
WALKER EXHAUST 31653 GASKET	1	Delete
WALKER EXHAUST 36339 OXYGEN SENSOR BUNG	1	Delete
WALKER EXHAUST 35053 WASHER	1	Delete
WALKER EXHAUST 31676 GASKET	1	Delete
WALKER EXHAUST 31320 GASKET	1	Delete
WALKER EXHAUST 31321 GASKET	1	Delete
WALKER EXHAUST 31331 GASKET	1	Delete
WALKER EXHAUST 31332 GASKET	1	Delete
WALKER EXHAUST 31334 GASKET	1	Delete
WALKER EXHAUST 31354 GASKET	1	Delete
WALKER EXHAUST 31358 GASKET	1	Delete

Master Item Merge - If needed, it is possible to merge items using either a screen function or an import item details template

Master Item Condition Selector - A master item can have a Condition associated with it. Possible condition codes are controlled on the System>Setup>Inventory Tab. This material condition will be used when creating a listing on the relevant sales channel

The screenshot shows the Etail Solutions software interface. At the top, there's a toolbar with various icons for file operations like Save View, Save View As, Export Data From Current View, Select All, Clear All, Delete Item, Merge Items, Print Labels, Update Buyer, Copy Master Item, Import Items, Import Style Items, Import Updates, and New Item. Below the toolbar is a 'Master Items' list view with a search bar and a 'Merge' button. To the right, there's a 'Conditions' section titled 'Add New Condition' with a table for defining item filters.

Catalog Screens and Functions - Master Item Screen

The Master Items list screen provides a view of all items within the catalog.

This screenshot shows the Master Items screen in Etail Solutions. The main area displays a grid of items with columns for Sku, Status, Title, Manufacturer, Part #, UPC, ORM-D, Notes, Item Type, Variation, Parent, Stock, Supplier, and In Stock. A sidebar on the left contains a navigation tree with categories like Catalog, Item Catalog, Fulfilled by Amazon, Pricing, Shipping, Restrictions, Publication Templates, and Analytics and Data. On the right, there are filter panels for Manufacturer, Status, Sales Channel, and Suppliers, along with a preview image of a car part.

Catalog Screens – Sales Listings Screen

The Sales Listing screen provides a view of all sales listings within the catalog; it also includes a bulk update utility that allows 100,000 records to be adjusted, publication triggers to be performed, or other actions to be performed.

The Supplier Listing screen provides a view of all supplier listings within the catalog; it also includes a bulk update utility that allows 100,000 records to be adjusted, publication triggers to be performed, or other actions to be performed.

CATM: Channel Listings Screens

Channel Listing Screens and Functions

The Sales Listing details screen has one tab per sales channel record with three panels providing details of how the item is being sold and associated inventory, attributes associated with the listing, and details on pricing history.

The sub-structure of the Master Item is a collection of associated channel records by type.

For display purposes, the secondary channel types of content, business system, and 3PL-WMS are displayed under the Supplier or Integration channel types

Location	Qty Lsten...	Inventory	Shipping	Overhead	Total
QAA	100	3	39.00	0.01	39.01

The Supplier detail screen has one tab per supplier channel record with each record having three panels that provide details of how the item can be fulfilled, and inventory by supplier location, supplier, attributes from the supplier catalog, and details on supplier price, MSRP, MAP, and UPP.

Date	User	Event Type
7/1/2021 7:10 PM	JDevies	

The content channel is a collection of attributes that other channels can use for publishing or pricing/shipping control purposes. If necessary, multiple content channels can be created for a single item.
