× Cancel Orders

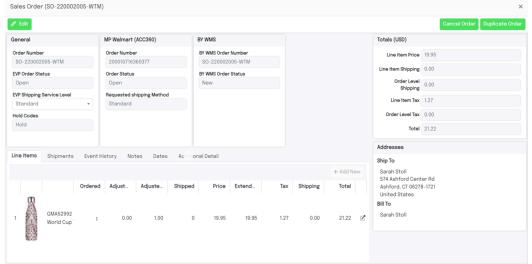

By selecting the pop-out icon on the record the detail screen will be displayed for the record type

Detailed information about the selected row from the display grid

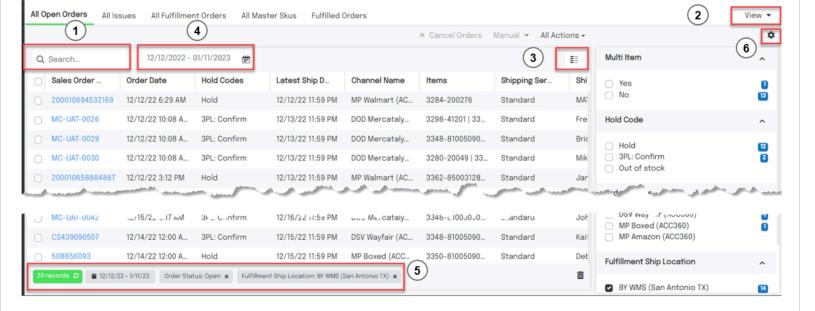

Selecting the 'See All' hyper link will show all order history events

Selecting the record reference displays the relevant business object, in this case the sales orders

Web User Interface - Search, Display Controls and Filtering Options

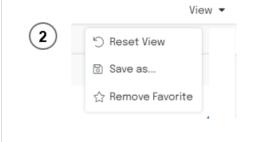

The web user interface supports multiple options to control which records are displayed and the level of information provided in the display grid

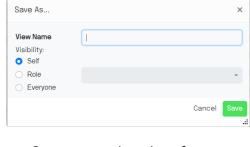

The most direct way of finding the record is to search using a text string that represent the:

- Item Number
- Item Title
- Sales order number
- Customer name
- City
- Tracking number

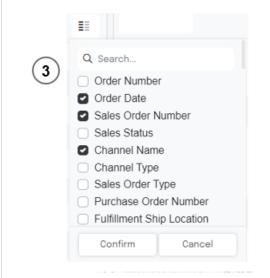

If needed the user can either:

- Reset the current view to its default column, information and filter criteria
- Save a copy as a new View

 Or remove the view from Favorite

The Column Chooser option allows the user to indicate which columns they wish to display in their display grid

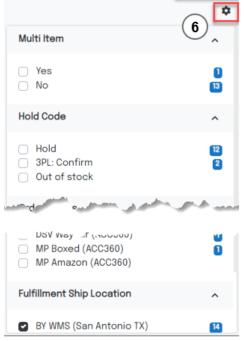

Once a column is displayed the user can drag and drop it into their preferred position in the grid

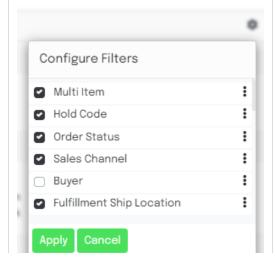

Using the date select the user can control which records are displayed based on a defined time period, i.e. all sales orders in the last week

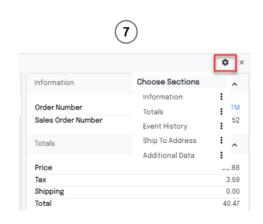

The record summary provide a count of the records found that match the specific date range and filter criteria. The delete icon removes the filter and displays all records

The attribute based search allows a user to filter the record in the grid based on selection of one or more attributes which "AND' together to only display records that match all the criteria.

The setup icon in the information plan allows a user to control which elements of summary information are displayed and in what order

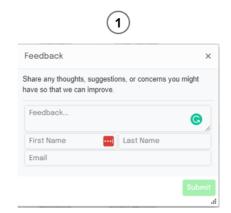

Web User Interface - User Options

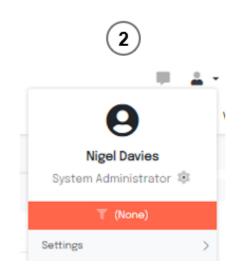

There are a number of user specific control options

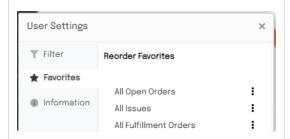

This option allows a user to provide general feedback and suggestion, it does not replace the Help Center Ticketing

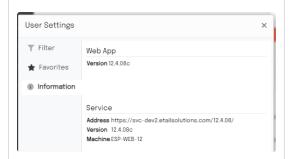

ThIs optional setup option is used to performed detail setup of the user roles tab groups, list screens and menu options

Including selecting the channel filter that should be used to limit

Reording the tab sequence on the favorites option

Version details that may be requested during support activities
