FBA Shipping Fees Calculation

When selling FBA items, merchants need to know how much Amazon will charge for shipping the items in order to effectively reprice.
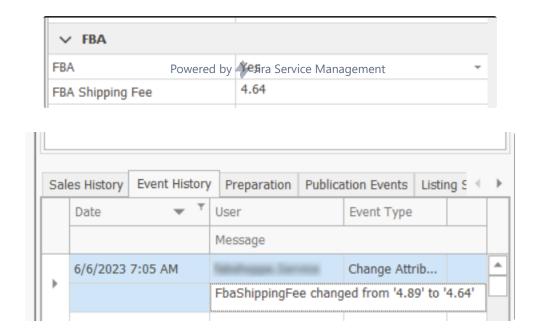

EVP calculates FBA Shipping Fees in two ways:

1) Downloading the estimated fees directly from Amazon

In this method, two processors run daily and attempt to load FBA fees from an FBA fee report that is generated by Amazon daily, and also through Amazon's API, for items that do not appear on the report.

If the fee is found it is either confirmed as correct, or updated. The fee is stored in an attribute on the listing in EVP. Changes to the fee are logged in the listing's event history.

If the FBA Shipping Fee attribute is found on a listing, that value will always be used as the Shipping Cost during repricing.

2) Calculating the Fee using attribute data

In this method EVP attempts to calculate FBA fees by emulating Amazon's FBA fee structure inside of EVP using attributes such as dimensions, weight, price, and a small and light flag to calculate the fee.

This method is dependent on having good values for weights and dimensions and
