Setup Chrome Kiosk Mode for Native Shipping

To effectively auto-ship, enabling kiosk printing on Chrome may be necessary. Kiosk printing sends the documents directly to the printer without the additional step of clicking "print" in the print preview.

Before taking these steps, ensure the correct printer is your default.

Creating the Shortcut

- Find the location of Google Chrome on your computer. If it isn't on your desktop, you can search for it in the Windows menu, right-click, and click open file location.

- Create a copy of the shortcut onto your desktop and rename if desired.

Enabling Kiosk Printing

- Right-click on the shortcut and open the properties.
- In the target field after ... `chrome.exe"` , add in `--kiosk-printing,` including the space.
